Organizing Agency: Department of Public Health Dentistry, MGMDCH, NSS Unit of MGMDCH & Department of Preventive and Social Medicine MGM Medical hospital, Kamothe Navi Mumbai

Number of Students attended:4

Antenatal Care (ANC) plays a crucial role in promoting maternal and fetal well-being. One often overlooked aspect of maternal health is oral health, which can be significantly affected by pregnancy. Hormonal changes during pregnancy increase the risk of gum disease, dental caries, and other oral health issues, which can, in turn, impact overall maternal health and pregnancy outcomes. In ANC camps, educating pregnant women about oral health is essential to prevent complications such as pregnancy gingivitis, periodontitis, and enamel erosion due to morning sickness. Providing oral health screenings, guidance on proper dental hygiene, and access to professional dental care can improve both maternal and fetal health. MGM Dental College constantly takes efforts of extending the oral health care to the community. The oral care initiative was also extended to pregnant women at ANC camp MGM medical hospital, Kamothe with the intention of creating awareness about pregnancy related oral health problems.

Aim and objective:

1. To assess and promote awareness of the effects of pregnancy on oral health among pregnant women attending ANC camps, ensuring early detection, prevention, and management of oral health issues to improve maternal and fetal well-being.
2. To educate pregnant women about the common oral health issues associated with pregnancy, such as gingivitis, periodontitis, and dental caries.

Method:

Oral health education on pregnancy related dental issues was given to patients using models, posters and charts. Educational sessions will include demonstrations of proper brushing and flossing techniques, dietary recommendations, and guidance on managing pregnancy-related oral health concerns such as gingivitis and tooth sensitivity. A type III examination was carried out with the use of tongue depressor. All the patients were assessed for oral health status and were explained the need to get the problems corrected. The patients were made aware of the existing dental problems and how pregnancy affects the oral health status.

Observations: A total of 05 patients were examined for various dental problems. Those requiring extensive treatment were referred to MGM Dental College and Hospital, Kamothe.

Oral health status:

Condition	No. of individuals	Percentage %
Dental caries	2	40
Gingivitis	3	60
Root piece	0	00
Prosthesis	0	00

**Interpretation and conclusion:**

1. A significant number of participants exhibited poor oral hygiene practices, including irregular brushing and a lack of knowledge about pregnancy-related dental issues such as gingivitis and tooth sensitivity.
2. Educating new mothers about dental care at ANC camps is an effective strategy for promoting maternal and infant oral health. Providing simple, practical dental care tips can help prevent common oral health issues and reduce the risk of complications during pregnancy.
