WHY CAREER IN CYBER & DIGITAL SCIENCE?

Technology is indispensable in personal, social, organizational and even governmental functioning and development. Cyber security includes both the technologies and processes used to protect digital devices and networks from digital attacks, hacking attempts, and unauthorized access.

Digital World: It is estimated that 5G user base shall globally scale up rapidly and in three years to a scale that 3G and 4G took nine and six years, respectively, to achieve. Commercial roll outs have kicked off in few nations and is also expected to be rolled out in India soon.

Cyber Crime Statistics: The Internet Crime Report for 2019, released by USA's Internet Crime Complaint Centre (IC3) of the Federal Bureau of Investigation, has revealed that India stands third in the world among top 20 countries that are victims of internet crimes. Every IT position is also a cyber security position now. Every IT worker, every technology worker, needs to be involved with protecting and defending apps, data, devices, infrastructure, and people.

Digital India: India's national priorities have digital as an integral aspect of all key initiatives - Digital India, smart city projects, etc.

Talent Gap & Skills Shortage: The global cyber security workforce gap is daunting, with real-world implications for organizations in all industries and of all sizes. In an era of high-profile data breaches and devastating cyber attacks, cyber security impacts every individual and every organization. There exist wide ranging estimates for the required growth of global cyber security workforce ranging from 145% to 400% in the U.S. and in other major global economies. According to a study by ISC2 study in the next 5 years globally 25 million security professionals will be required. Currently there is a huge shortage of information security consultants. The cyber security job market is growing exponentially and isn't expected to slow down any time soon. Cyber security Ventures predicts that globally there will be 3.5 million unfilled cyber security jobs by 2021, up from 1 million openings in 2014.

India Inc., facing a scarcity of cyber security professionals. Salaries offered for such roles by 25-35% over the past year. Hacking and cyber attacks are compelling firms to hire talent at a premium.

Demonetisation and the government's push for Digital India have pushed demand for cyber security teams. But Indian companies are struggling to beef up their cyber security teams as there's hardly enough talent around.

There are currently around 30,000 cyber security vacancies in India, recruitment experts say, including several for C-suite leaders who can overhaul the overall security strategy of a firm. Other openings include managers who can oversee cyber security projects and engineers with impeccable domain knowledge. By 2025, the cyber security space is expected to generate around a million jobs in India.

MESSAGE FROM FOUNDER PRESIDENT & CHAIRMAN

Digitization, Digitalization & Digital Transformation is a way of life today. Call it by what ever names and terms as you like - The connected world, the Internet of Things, The Internet of everything, Industry 4.0, etc. we are indeed living in exciting yet challenging times where social media handles get hacked and smart assistants can relay private information to the global netizens. Smart homes, Smart Cities, Smart devices bring their own challenges and possibilities. There are various scenarios built by experts which point to dark possibilities of cyber warfare, cybercrime, cyber fraud, etc. In a world of big data and more connected devices on the planet than the human population, Cyber and Digital Science has come into sharp focus.

As an educational group which prides itself to be at the forefront of offering learning opportunities in tune with the present times, I am indeed glad to present to you the **Pioneer Batch** of very unique undergraduate programme B.Sc- Cyber & Digital Science programme through the "Suryadatta International Institute of Cyber Security (SIICS)" which is affiliated to the Savitribai Phule Pune University.

The demand for cyber professionals in India is huge. At a time when we are going digital in all aspects and the number of cyber-crimes projected to occur in India is quite high, cyber security and digital science professionals will be in high demand in all sectors, be it the information technology, financial and telecom sector to the utility sector and so on.

We shall be supplementing the academic programme of the Savitribai Phule Pune University with industry recognised certifications as well and wider industry exposure. We are sure that the B.Sc- Cyber & Digital Science programme offered by Suryadatta International Institute of Cyber Security (SIICS) in affiliation to the Savitribai Phule Pune University shall develop world-class skilled and certified professionals who are ready to contribute on the global stage.

I welcome you to Suryadatta Group of Institutes and Suryadatta International Institute of Cyber Security.

2. Three year Diploma course of board of technical education conducted by government of Maharashtra OR its equivalent OR
3. Higher secondary school certificate (10+2) Examination with English and vocational subject of +2 level (MCVC)

Beyond Curriculum:

The academic curriculum for Cyber & Digital Science is supplemented and enriched through multiple additional inputs, knowledge based learning in the form of guest lectures, seminars, conferences, symposiums, experiential learning in the form of field work, case studies – both live and old, hands on insights through projects with the industry and the surveillance agencies, assistantship with cyber lawyers and advocates, competitions & professional society activities. We also provide twenty modules every year in the form of workshop modules as additional inputs.

Why B. Sc. – Cyber & Digital Science?

The required skills are analytics, engineering, and software development, and also highly specialised functions such as intrusion detection (monitoring suspicious activity on the network), access management, risk auditing, cryptography, forensic sciences, and network security.

Even as cybercrimes get more complex, most available candidates have only the basic training and certifications. Companies, meanwhile, need people who can manage advanced technologies, take care of the transformation from legacy to new-age systems, and innovate. This programme attempts to bridge this gap and create domestic talent in this area.

CYBER & DIGITAL FORENSICS AWARENESS INITIATIVE

Suryadatta has been conducting various short-term programmes, conferences, symposiums, workshops and conclaves in emerging areas and sunrise sectors as well as the national thrust areas. In tune with its philosophy and with a view to contribute to society, Suryadatta Group of Institutes have over the past several years organised various learning interventions and knowledge management series in the areas of Cyber Security, Information Security, Data Science, Big Data, Business Analytics, and other emerging areas. These initiatives have received an overwhelming response and have also added immense value to the student community, faculty, industry, entrepreneurs and the practitioners. These initiatives have invariably led to meeting the futuristic talent needs of the nation.

In view of this, Suryadatta Education Foundation has now ventured into Cyber Security related areas to sensitise & create awareness on the increasing cyber threats. Apart from offering BSc in Cyber Security and other professional certification courses in allied areas, it is forefront in conducting awareness drives / Initiatives with a purpose to spread the knowledge of Cyber Security related domains & make the public aware of the possible threats and also to encourage students to pursue careers in this field and become expert Cyber security professionals. Below are few such awareness initiatives organised:

- | | |
|---|---|
| • Cyber Security Awareness Initiative | • Humanitarian Forensics awareness Initiative |
| • Digital Forensic Science awareness Initiative | • Narcotic Drugs and Psychotropic Substances Initiative |
| • Information Security Awareness Initiative | • Forensic Biotechnology Awareness Initiative |
| • Cyber Security & Incident Response Awareness Initiative | • Multimedia Forensic Awareness Initiative |
| • Cyber Malware Awareness Initiative | • Finger Print Science Awareness Initiative |
| • Web & Mobile Security Awareness Initiative | • Forensic Journalism Awareness Initiative |

WHAT DO CYBER SECURITY PROFESSIONALS DO?

Cyber security professionals add value to their organization by carrying out security operations, security administration, risk assessment, analysis and management, governance, risk management and compliance (GRC), cloud computing security, security and threat intelligence analysis, security engineering and administration, penetration testing, intrusion detection & network monitoring, operational technology security, secure software development, forensics.

There have been more than Thousand research areas in the field of Cyber security gathered by our esteemed faculties. These are some of the areas covered by for the purpose of promoting and educating Cyber security.

CHIEF INFORMATION SECURITY OFFICER

A chief information security officer (CISO) is the senior-level executive within an organization responsible for establishing and maintaining the enterprise vision, strategy, and program to ensure information assets and technologies are adequately protected. The CISO directs staff in identifying, developing, implementing, and maintaining processes across the enterprise to reduce information and information technology (IT) risks. They respond to incidents, establish appropriate standards and controls, manage security technologies, and direct the establishment and implementation of policies and procedures. The CISO is also usually responsible for information-related compliance (e.g. supervises the implementation to achieve ISO/IEC 27001 certification for an entity or a part of it).

FORENSIC COMPUTER ANALYST

With the increasing rate of cybercrimes, the need for forensic computer professionals who will investigate data breaches, security incidents and criminal activity can't be overemphasized. With good analytical skills, you are most likely going to succeed in a career as a forensic computer analyst.

FORENSIC COMPUTER ANALYST

A Forensic Computer Analyst is a specially trained professional who works with law enforcement agencies, as well as private firms, to retrieve information from computers. Computer Forensics Analysts are also referred to as computer forensics investigators, examiners or specialists. Computer forensic analysts combine their computer science knowledge with their forensic skills to recover information from computers and storage devices. In addition, they are responsible for assisting law enforcement officers with cyber crimes and also to retrieve evidence. Furthermore, forensic computer analysts are also responsible for following all safety and privacy procedures when handling sensitive financial or personal information such as documents, videos, or pictures. Additionally, they must handle and receive evidence carefully and keep accurate records of duties performed.

INFORMATION SECURITY ANALYST

An information security analyst is one who is employed in order to monitor private data and prevent any malicious attacks or attempts to steal such data. Information security analysts may be referred to as digital security professionals who make the use of protection technology such as secure servers and firewalls to protect their client's data. The information security meaning also includes efforts made to identify weaknesses in networks that make data vulnerable and address these issues to strengthen data security. In a world that effectively runs on technology, the demand for information security skills is only going to increase.

PENETRATION TESTER

Some penetration testing jobs carry other titles, such as "ethical hacker" or "assurance validator." These terms reflect the main duties of a penetration tester (or "pen tester"): to seek, identify, and attempt to breach existing weaknesses in digital systems and computing networks. These systems and networks include websites, data storage systems, and other IT assets. Many people confuse penetration testing with vulnerability testing. In actuality, these two cybersecurity specializations have distinct differences. Vulnerability testers look for flaws and weaknesses during a security program's design and setup phases. Penetration testing professionals specifically seek out flaws and weaknesses in existing, active systems. Penetration testing teams simulate cyberattacks and other security breaches designed to access sensitive, private, or proprietary information. They utilize existing hacking tools and strategies as well as devise their own. During a simulated attack, pen testers document their actions to generate detailed reports indicating how they managed to bypass established security protocols, and to what degree. Organizationally, penetration testing teams create value by helping their employers avoid the public relations fallout and loss of consumer confidence that accompany actual hacks and cyberattacks. They also help businesses and organizations improve their digital security measures within established budgetary confines. The sections that follow explore key soft and hard penetration tester skills.

IT SECURITY ENGINEER

The Information Security Engineer is responsible for the security of an organization's computer systems and networks. Also known as an Information Security Analyst, the engineer implements security measures that effectively safeguard sensitive data in the event of a cyber-attack. The role is highly collaborative, involving frequent interaction with various members of the IT team. The Information Systems Security Engineer is expected to report directly to upper management. The Information security engineer should work in collaboration with the information security team to offer support to security tools and technologies such as firewall, proxy server, remote access, and others. The professional must document the configurations and network designs to help in the effective execution. It is the Information Security Engineer who conducts log analysis and other network forensic investigations. They provide full cooperation to the appropriate teams for participating in cyber investigations.

SECURITY ARCHITECT

Security architects assess their organizations' information technology and computer systems, identifying strengths and weaknesses. They conduct penetration tests, risk analyses, and ethical hacks on local area networks, wide area networks, and virtual private networks. They also assess routers, firewalls, and comparable systems to determine efficacy and efficiency. Security architects think like hackers. They push existing computer and network security systems to their limits. Once security architects identify vulnerabilities in existing systems, they plan and implement architectural changes to boost security structures. These professionals often develop and implement entirely new security architectures. They blend knowledge of security hardware and software, organizational needs, and cybersecurity risks with organizational policies and industry standards. As security architects build and maintain security systems and networks, they prepare budgets, oversee expenses, and allocate personnel resources as needed. Security architects provide guidance to information technology (IT) security team members. They also lead IT analysts, security administrators, and security engineers to coordinate effective security protocols. Security architects also respond to security breaches. When incidents arise, security architects assess causes, damages, and data recovery, preparing thorough reports for their colleagues, managers, and executives. They also implement appropriate changes, updates, and upgrades in response to vulnerabilities and incursions.

SECURITY SYSTEMS ADMINISTRATOR

A security systems administrator is someone who gives expert advice to companies regarding their internal security procedures and can also help to detect any weaknesses in a company's computer network that may make them vulnerable to cyber attacks. Security systems administrators are a company's first step in monitoring suspicious activity either within the local network or from outside internet traffic.

Security systems administrators are in charge of the daily operation of security systems, and can handle things like systems monitoring and running regular backups; setting up, deleting and maintaining individual user accounts; and developing organizational security procedures.

7 PILLARS OF MULTIPLE CAREER PATHWAYS - THE GUIDING PRINCIPLE

By education, I mean an all-round drawing of the best in child and man in body, mind and spirit...Mahatma Gandhi.

Suryadatta Group of Institutes is guided by the above quote of the father of the nation. All of academic initiatives embody the above ethos, in letter and spirit and thus we go beyond the narrow perspective of education in terms of degrees and jobs.

We believe in creating a transformational educational experience. Various activities are offered round the year for Holistic Development of the students leading to the 7 pillars of Multiple Career Pathways.

- 1. Higher Education & Life long Learning :** Higher Education, Research, Professional Certifications, Executive Education & LifeLong Learning. MBA / PGDM students can pursue PhD from Suryadatta Research Centre or institutes of National / International repute.

A spacious, clean campus for healthy teaching and learning atmosphere.

Prevention & Precautions as per WHO & Health Ministry guidelines at Suryadatta Group of Institutes.
A spacious, clean campus for healthy teaching and learning atmosphere.

1. Entire campus, offices and classrooms are disinfected at regular intervals.

2. Social distancing of 6 feet is being maintained in the campus and classrooms.
Large number of classrooms and offices makes its easy to maintain physical distancing.

3. Thermal screening devices are used for checking body temperature and screening.
Vehicles are sanitized at the entry gate and parking.
Safety measures are compulsory - Wearing helmet, wearing masks, social distancing etc.

4. Every floor of the campus is well equipped with wash basins and foot operated sanitizer dispensers.
5. Mandatory use of recommended sanitizers during entry to premises.

6. First aid kits are made available in sufficient quantity.

7. Well instructed sign boards displayed throughout the campus help students understand and follow rules and regulations.

8. Minimum 1 hour of daily fitness activity for all staff, students and parents.

9. Health kit is provided to all the students at time of joining. (Mask, sanitizer bottle).
Oxymeters kept at entry, exit and in each building for regular checking.

10. For all emergency purposes a vehicle is available in campus round the clock.

11. Periodic Health check-up camps

12. Well equipped Isolation room for staff and students.

13. Tie up with hospitals in case of emergency, Ambulance at call.

Satellite set up at different locations in various districts.

During the uncertainty, Suryadatta is well equipped to continue Teaching and Learning through a Digital Ecosystem, thus empowering students for the future with in 'demand skills' by tomorrow's employers. At Suryadatta we practice both – The Traditional method of face to face teaching and the Online learning methods to facilitate student achievement of learning outcomes.

In order to take care of the students effective learning, we have created satellite set ups at important locations. These, well equipped set ups have up to date teaching learning facilities and are centrally located. We have made arrangements for students to attend Career Guidance, Counselling and face to face teaching / classes at these locations.
